Question	If 'A' antigen is absent on the surface of RBC of a person, then his plasma contains
Type	multiple choice
Option	Anti-a
Option	Anti-b
Option	Both (a) and (b)
Option	None
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Serotonin is secreted by -
Type	multiple choice
Option	Macrophages
Option	Lymphocytes
Option	Eosinophils
Option	Basophils
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	How many statements are correct (a) Fibrinogens are needed for coagulation of blood (b) Globulins are primarily involved in osmatic balance (c) Globulins are primarily involved in osmatic balance (d) Factors for coagulation are found in plasma in an inactive form (e) Plasma without clotting factor is called serum
Type	multiple choice
Option	One
Option	Three
Option	Four
Option	None
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	100 ml of blood contains
Type	multiple choice
Option	20-25 gms of Haemoglobin
Option	8-12 gms of Haemoglobin
Option	12-16 gms of Haemoglobin
Option	25-30 of Haemoglobin
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	Which statement is incorrect
Type	multiple choice
Option	Neutrophils & monocytes are phagocytic in nature
Option	Basophiles are involved in allergic reactions
Option	Lymphocytes are responsible for immune response of body
Option	Platelets are fragments produced from megakaryocytes
Answer	2
Solution	

Positive Marks	4
Negative Marks	1
Question	Match the types of WBC listed under column I with the shape of nucleus given under column II and Select the correct option from the given codes.

Column – I		Column - II	
A	Neutrophils	(i)	Kidney shaped
B	Eosinophils	(ii)	S-shaped
C	Basophils	(iii)	4 to 7 lobes
D	Monocytes	(iv)	Disc-shaped

Type	multiple choice
Option	A- (iii), B- (iv), C- (i), D- (ii)
Option	A- (ii), B - (ii), C - (i), D- (iv)
Option	A- (ii), B- (i), C- (iv), D- (iii)
Option	A- (iii), B- (iv), C- (ii), D-(i)
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Identify the following type of blood cells and mark the correct option. Type	multiple choice
Option	A - Monocyte, B - Eosinophil, C - Neutrophil, D - Basophil, E - Blood platelets
Option	A - Monocyte, B - Basophil, C - Neutrophil, D - Blood platelets, E – Eosinophil
Option	A - Basophil, B - Blood platelets, C -Monocyte, D -Eosinophil, E – Neutrophil
Option	A - Basophil, B - Blood platelets, C – Monocyte, D – Eosinophil, E – Neutrophil
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	Fibrinogens $\xrightarrow{A}$ Fibrin Prothrombin $\xrightarrow{B}$ Thrombin
Type	multiple choice
Option	a = Thrombin, b = Thrombokinase
Option	a = Thrombokinase, b = Thrombin
Option	a = Ca^{++}, b = Thrombin
Option	a = Thrombokinase, b = Ca^{++}
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Statement I: - Erythroblastosis Foetalis could be fatal to foetus or could cause severe anaemia. Statement II: - It can be avoided by administering anti-Rh antigen to the mother immediately
Type	multiple choice
Option	Both statements I and II are correct.
Option	Statement I is correct but statement II is incorrect
Option	Statement I is incorrect but statement II is correct
Option	Both statements I and II are incorrect
Answer	2

Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion: 'O' blood group is known as universal donar Reason: 'O' blood can be donated to person with any blood group
Type	multiple choice
Option	If both the assertion and the reason are true and the reason is a correct explanation of the assertion
Option	If both the assertion and reason are true but the reason is not a correct explanation of the assertion
Option	If the assertion is true but the reason is false
Option	If both the assertion and reason are false
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion- RBCs are formed in the red bone marrow in the adults Reason- They have a red coloured, iron containing complex protein called haemoglobin.
Type	multiple choicex
Option	If both the assertion and the reason are true and the reason is a correct explanation of the assertion.
Option	If both the assertion and reason are true but the reason in not a correct explanation of the assertion
Option	If the assertion is true but the reason is false
Option	If both the assertion and reason are false
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	Statement 1- Platelets can release a variety of substances most of which are involved in the coagulation or clotting of blood. Statement 2 - A reduction in number of platelets can leads to clotting disorders which will lead to excessive loss of blood from the body
Type	multiple choice
Option	Both statements 1 and 2 are correct
Option	Statement 1 is correct but statement 2 is incorrect
Option	Statement 1 is incorrect but statement 2 is correct
Option	Both statements 1 and 2 are incorrect
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	In comparison to WBC, RBC have -
Type	multiple choice
Option	Antigen on RBC surface
Option	Carbonic anhydrase
Option	Haemoglobin
Option	All of these
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion – Lymph contains all formed elements and proteins found in blood

	Reason - Lymph has the same mineral distribution that in plasma.
Type	multiple choice
Option	If both the assertion and the reason are true and the reason is a correct explanation of the assertion.
Option	If both the assertion and reason are true but the reason in not a correct explanation of the assertion
Option	If the assertion is true but the reason is false
Option	Assertion is false but the reason is true
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Statement 1- The fluid present in the lymphatic system is called the lymph. Statement 2 - Fats are absorbed through lymph in the lacteals present in the stomach villi.
Type	multiple choice
Option	Both statements 1 and 2 are correct.
Option	Statement 1 is correct but statement 2 is incorrect.
Option	Statement 1 is incorrect but statement 2 is correct.
Option	Both statements 1 and 2 are incorrect.
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	All arteries carry oxygenated blood except
Type	multiple choice
Option	Systemic artery
Option	Hepatic artery
Option	Pulmonary artery
Option	Cardiac artery
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	An artery can be distinguished from a vein in having
Type	multiple choice
Option	Thicker wall
Option	Lesser Lumen
Option	No valves
Option	All of these
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion- Pulmonary artery and pulmonary veins carry blood with same blood pressure Reason - Walls of veins are much thicker than that of arteries.
Type	multiple choice
Option	If both the assertion and the reason are true and the reason is a correct
Option	If both the assertion and reason are true but the reason in not a correct explanation of the assertion
Option	If the assertion is true but the reason is false
Option	If both the assertion and reason are false
Answer	4

Solution	
Positive Marks	4
Negative Marks	1
Question	Blood capillaries are made up of
Type	multiple choice
Option	Endothelium and thin coat of connective tissue
Option	Endothelium and thin coat of muscle fibre
Option	Endothelium and thin coat of connective tissue and muscle fibre
Option	Only endothelium
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Pulmonary veins are those
Type	multiple choice
Option	Carry oxygenated blood from lungs to heart
Option	Carry deoxygenated blood from lungs to heart
Option	Carry deoxygenated blood from heart to lungs
Option	Carry oxygenated blood from heart to lungs
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	In a normal man, blood pressure is
Type	multiple choice
Option	120/80 mm of Hg
Option	80/100 mm of Hg
Option	80/120 mm of Hg
Option	100/80 mm of Hg
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Indicate correct statement for Human:
Type	multiple choice
Option	Arteries always carry oxygenated blood while veins always carry deoxygenated blood
Option	Venous blood is returned to left auricle
Option	Arteries are provided with valves while veins are devoid to valves.
Option	Arteries always carry blood away from the heart, while veins always carry blood towards the heart.
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Normal BP is 120/80 mmHg in an adult. In this measurement 120 mmHg is the _____ pressure and 80 mmHg is ____ Pressure
Type	multiple choice
Option	Diastolic, systolic
Option	Systolic, diastolic
Option	Pulse, diastolic
Option	Pulse, systolic
Answer	2

Solution	
Positive Marks	4
Negative Marks	1
Question	Which vessel carries most oxygenated blood:
Type	multiple choice
Option	Pulmonary artery
Option	Pulmonary vein
Option	Coronary artery
Option	Cerebral artery
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	After the death of Human:
Type	multiple choice
Option	Both veins and arteries are full of blood
Option	Both veins & arteries are empty
Option	Arteries are full of blood while veins are empty
Option	Veins are full of blood while arteries are empty
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Pulmonary circulation constitutes
Type	multiple choice
Option	Pulmonary artery -> Heart -> Pulmonary vein
Option	Aorta -> Pulmonary artery -> Vein
Option	Pulmonary artery - Lungs -> Pulmonary veins
Option	Artery -> Capillaries -> Veins
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	What does Systemic circulation provide to tissue
Type	multiple choice
Option	Oxygen
Option	Nutrients
Option	Other essential substances
Option	All of these
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	The right atria of Human heart receives
Type	multiple choice
Option	Oxygenated blood
Option	Deoxygenated blood
Option	Mixed blood
Option	Do not receives blood
Answer	2
Solution	
Positive Marks	4
Negative Marks	1

Question	Select the incorrect statement
Type	multiple choice
Option	Blood enters into left atria from pulmonary vein
Option	Artery connects Aorta and capillaries
Option	Left ventricle receives deoxygenated blood
Option	Pulmonary artery connects right ventricles to lungs
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	The given shows schematic plan of blood circulation in humans with labels A to D. Identity the labels along with their function and select the correct option. Type	multiple choice
Option	C- Vena Cava - takes blood from body parts to rights atriums, P_{CO_2} = 45 mm Hg
Option	D- Dorsal aorta - takes blood from heart to body parts, $P_{O_2} = 95\,mm$ Hg
Option	A – Pulmonary vein – takes impure blood from body parts to hearts, $P_{O_2} = 60$ mm Hg
Option	B – Pulmonary artery – takes blood from heart to lungs, $P_{O_2} = 90$ mm Hg.
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Heart is derived from -
Type	multiple choice
Option	Ectoderm
Option	Endoderm
Option	Ecto-endoderm
Option	Mesoderm
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Select the correct statement related to heart
Type	multiple choice
Option	Situated in thoracic cavity
Option	It has a size of clenched fist
Option	Situated between two lungs
Option	All of these
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Both the atria of human heart are separated by
Type	multiple choice
Option	Intra -atrial septa

Option	Inter - atrial septa
Option	Atrioventricular septa
Option	Inter- ventricular septa
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	The opening between right atrium and right ventricle is guarded by
Type	multiple choice
Option	Bicuspid valve
Option	Tricuspid valve
Option	Mitral vale
Option	Both a and c
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	Statement I- Heart is slightly tilted towards the left. Statement II - Heart is protected by a single membranous bag called pericardium.
Type	multiple choice
Option	Both statements 1 and 2 are correct
Option	Statement 1 is incorrect but statement 2 is correct
Option	Statement 1 is correct but statement 2 is incorrect
Option	Both statements 1 and 2 are incorrect
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion: The valves prevent any backward flow of blood. Reason: The valves allow the flow of blood only in one direction.
Type	multiple choice
Option	If both the assertion and the reason are true and the reason is a correct explanation of the assertion.
Option	If both the assertion and reason are true but the reason in not a correct explanation of the assertion
Option	if the assertion is true but the reason is false
Option	If both the assertion and reason are false
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion: The walls of atria are thicker that of walls of ventricles. Reason: Ventricular walls have thinner muscles than that of atria.
Type	multiple choice
Option	If both the assertion and the reason are true and the reason is a correct explanation of the assertion.
Option	If both the assertion and reason are true but the reason in not a correct explanation of the assertion
Option	If the assertion is true but the reason is false
Option	If both the assertion and the reason are false
Answer	4
Solution	
Positive Marks	4
Negative Marks	1

Question	Sino atrial node and atrio ventricular node are present in -
Type	multiple choice
Option	Left upper corner of right atria, left lower corner of right atria
Option	Right upper corner of right atria, left lower corner of right atria
Option	Right upper corner of right atria, right lower corner of right atria
Option	Right lower corner of right atria, left upper corner of right atria
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
Question	Semilunar valves are present at
Type	multiple choice
Option	Base of pulmonary artery
Option	Base of aorta
Option	Both a and b
Option	Base of pulmonary veins
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	To reach the left side of the heart the blood must pass through -
Type	multiple choice
Option	Sinus venosus
Option	Kidney
Option	Liver
Option	Lungs
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	The T- wave represents
Type	multiple choice
Option	Repolarisation of ventricles
Option	Depolarisation of ventricles
Option	return of the ventricles from excited to normal state
Option	Both a and c
Answer	4
Solution	
Positive Marks	4
Negative Marks	1
Question	Which of the following is not represented in normal Human ECG?
Type	multiple choice
Option	Depolarisation of atria
Option	Depolarisation of ventricles
Option	Repolarisation of atria
Option	Repolarisation of ventricles
Answer	3
Solution	
Positive Marks	4
Negative Marks	1
Question	Assertion: All chambers of heart receives blood during joint diastole Reason: In joint diastole all cambers are in relaxed state
Type	multiple choice

Option	If both the assertion and the reason are true and the reason is a correct explanation of the assertion.
Option	If both the assertion and reason are true but the reason in not a correct explanation of the assertion
Option	If the assertion is true but the reason is False.
Option	If both the assertion and reason are false
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	All the four chambers receives blood simultaneously for -
Type	multiple choice
Option	0.4 seconds
Option	0.8 seconds
Option	0.1 second
Option	All chambers do not receives blood simultaneously
Answer	1
Solution	
Positive Marks	4
Negative Marks	1
Question	Among these which waves represent the excitation of the atria?
Type	multiple choice
Option	T-Wave
Option	P-Wave
Option	QRS Complex
Option	ST-Segment
Answer	2
Solution	
Positive Marks	4
Negative Marks	1
